

PS4_{Serna}

Misael Serna

February 2021

1 Part 1

One are that has always intrigued me is international sports. Specifically, the FIFA World Cup. I would love to see the data on performances, victories, goal scored, club of origin, and country of origin. I would love to see what the data shows in regards to patterns that may lead to success.

2 Part 2

2.1 Q5 Part D

mydf is a "tbl_df" "tbl" "data.frame"
mydf\$date is a character

2.2 Q6 Part 7

df1 is a "tbl_df" "tbl" "data.frame"
df is a "tbl_spark" "tbl_sql" "tbl_lazy" "tbl"

The columns might be different since we copied df1 into spark. Since the copying process can be slow, spark limits the data displayed by default.
